

Development of the Dual Training System at the Department of «Transport Engineering and Technologies» named after I.V. Sakharov

KazNAIU consistently develops a dual training system aimed at improving the professional training of students. This format makes it possible to effectively combine the theoretical knowledge acquired at the university with practical experience in production.

At the Department of «Transport Engineering and Technologies» named after I.V. Sakharov, dual training is implemented within the following educational programs:

6B07104 – Transport, Transport Engineering and Technologies;

6B11301 – Organization of Transportation, Traffic and Transport Operation;

6B11302 – Logistics (by industries).

A key direction of development is cooperation with leading enterprises and organizations in the region. Among the partners are LLP «SpecTransExpress», the Southern Regional Branch of JSC «Passenger Transportation», and other companies. They create real conditions for students to gain professional experience and contribute to the training of highly qualified and in-demand specialists.

Advantages of dual training:

for students – an opportunity to combine the learning process with practical activities, acquire professional skills, and increase competitiveness in the labor market;

for employers – participation in the training of young professionals in line with production requirements and the formation of a future talent pool.

The Department of «Transport Engineering and Technologies» named after I.V. Sakharov continues to improve the dual training system, strengthening cooperation with employers and enhancing the quality of training for future specialists.

Students of KazNAIU undergo practical training within the framework of dual education at LLP «SpecTransExpress».
